

BESS energy storage battery demand

Overview

The rapid rollout of BESS has significantly boosted overall demand for lithium-ion batteries. BESS remained the fastest-growing major end-use segment. Iola Hughes, Head of Research at Benchmark Mineral Intelligence, tells ESS News that 2026 is set to be another strong year for BESS, with forecast additions exceeding 450 GWh and no material supply constraints in sight. Meanwhile, the initial impact of rising lithium prices is already visible at. BESS allows electricity to be stored when supply exceeds demand and released when demand is higher than supply. Morgan's recent analysis shows that shipments of stationary energy storage. The battery energy storage system (BESS) industry is set for significant expansion, driven by the accelerating integration of renewables, growing demand for grid stability, and the rising need for efficient energy management across utility, commercial, and residential sectors.
