

Brunei ceramic capacitors discontinued production

Overview

In this MarketeEYE article, Dennis Zogbi of Paumanok Industrial Market Research creates a timeline of discontinuation announcements for multilayered ceramic chip capacitors (MLCC) and demonstrates their impact on lead times, and offers the reader a glimpse about. In each of the press releases between 2016 and 2019 that announced the discontinuation of MLCC from TDK, Murata, Taiyo Yuden and Walsin, reasons were given for the action. 22 and 47 Microfarad MLCC (Large Case Size) When viewed collectively, the conclusion that can be drawn is that the gaps that were created were in the 22 microfarad and 47 microfarad capacitance ranges, with some key products in the 100 microfarad range (Y5V). Multilayered ceramic chip capacitors (MLCC) have been in short supply since mid-2017, and this problem compounded itself in 2018 as many customers went below their comfort. The following creates a timeline of discontinuation, last order date and final production date. OCTOBER 2016: TDK discontinues 280 MLCC part numbers including the 0402, 0603.

This product suppresses acoustic noise, which occurs when a ceramic capacitor is used, by devising the materials and configuration. Product resistant to deflection cracking This capacitor is designed to prevent failures as much as possible by short mode caused by cracking when there is board deflection.

Murata to expand multilayer ceramic capacitors production at ...

The construction of the new facility will increase production capacity for multilayer ceramic capacitors in order to respond to increased demand. A new office and energy building will also be constructed at the same time. Overview of production building / management building / energy building
