

Do batteries need to be registered

Overview

Stop for a moment and think about all of the electrical components in your vehicle. There's a lot, right?

You've got heated seats, power windows, power locks, touchscreen infotainment systems, and systems like stop-start, Intelligent braking and much more. The electrical system in a modern vehicle is so complex, and the performance of your battery. In short, yes. While the car or truck will still start if you don't reset the registration, the BMS will continue to operate using the parameters of the old battery. This doesn't sound like much but this can lead to some new problems for you. Battery registration is reset by using a handheld tool that connects to the vehicle's OBD-II port under the dashboard. This device communicates with the vehicle's computer and can update the battery registration of the vehicle. The entire process takes only about a minute once the device is connected to the car and is a foolproof way to get the mos. Battery registration used to only be able to be completed at dealerships and could cost a hefty amount. Sometimes adding hundreds of dollars on top of the new battery. But not anymore. Drive on over to your local Batteries Plus, where you can purchase a new battery for your car or truck, have it installed on most vehicles, and at some locations have.
